Barracuda Cloud-to-Cloud Backup

Easy-to-use, cloud native backup for all your Microsoft Office 365 data.

Microsoft recommends you use third-party backup for your Office 365 data. A good backup with quick recovery is critical after a ransomware attack or accidental deletion. Restoring sites, entire folders, or mailboxes can be a tedious, manual process—and if the data you need is mission-critical, that means costly downtime you can't afford.

Barracuda Cloud-to-Cloud Backup is an easy-to-use cloud native solution that provides comprehensive, cost-effective, scalable backup and recovery for all your Microsoft Office 365 data, including Teams, Exchange Online, SharePoint, and OneDrive.

Easy to use

A newly redesigned, globally accessible user interface makes it fast and easy to find and recover data. Very fast search and filter options make restoring data back to your organization as easy as possible. And you can go from sign-up to running your first backup in five minutes. Complete visibility and reporting of source backup status, health monitoring, and storage statistics make it easy to understand backup status, while the audit log and email alerts keep you informed about the details of every action.

Flexible, comprehensive Office 365 support

Barracuda Cloud-to-Cloud Backup gives you the flexibility to restore Teams, Exchange, SharePoint and OneDrive data either fully or with highly granular detail. Full SharePoint support means you can backup and restore everything in SharePoint, including different site templates, custom lists, permissions, and metadata.

Cloud native backup

Cloud-to-Cloud Backup is a SaaS solution. There's no software or hardware for you to manage. Because your Office 365 data is already in the cloud, retaining your encrypted backup files in the network means better performance and instant scalability. With three external copies of your backup files for redundancy and security, backing up to the cloud just makes sense. And you can sign up and start running your first backup in just five minutes.
