Enabling the most-effective storage for managing explosive data growth

IBM Spectrum Archive is a member of the IBM Spectrum Storage software portfolio designed to address data storage inefficiencies by changing the economics of storage with a layer of intelligent software. This software creates an efficient “data footprint” that dynamically stores every bit of data at an optimal cost, helping to maximize performance and ensure greater security.

IBM Spectrum Archive Enterprise Edition (IBM Spectrum Archive EE) gives organizations an easy way to use cost-effective IBM tape drives and libraries within a tiered storage infrastructure. By using tape libraries instead of disks for Tier 2 and Tier 3 data storage—data that is stored for long-term retention—organizations can improve efficiency and reduce costs related to storing growing amounts of data. IBM Spectrum Archive EE seamlessly integrates with the scalability, manageability and performance of IBM Spectrum Scale, an IBM enterprise file management platform that enables organizations to move beyond simply adding storage—to optimizing data management.

Using the IBM Linear Tape File System (LTFS) technology, IBM Spectrum Archive EE provides direct, intuitive and graphical access to data stored in Linear Tape-Open (LTO) Ultrium tape cartridges and IBM 3592 tape cartridges. It eliminates the need for additional tape-management and data-access software.

With IBM Spectrum Archive EE, accessing data stored on an IBM tape cartridge—instead of on disk—is transparent. IBM Spectrum Scale keeps a pointer to the data on tape and, if requested, retrieves the data without user or operator intervention. By leveraging the capabilities of IBM Spectrum

Scale, IBM Spectrum Archive EE enables high performance and reliable access across the storage infrastructure. In turn, IBM Spectrum Archive EE enables IBM Spectrum Scale installations to add extensive capacity with lower media, floor space and power costs. And with policy-based migration, archive capacity can be expanded without impacting data availability.

IBM Spectrum Archive EE enables organizations to improve the cost-effectiveness of their cloud and analytics infrastructures by enabling:

- Operational storage tiers with tape, rather than storing cold data on costly disk storage.
- Storage of digital assets for the long term, so assets can be referenced and monetized for years to come.
- Creation of copies of data on operational storage, improving the efficiency and cost effectiveness of a tiered storage infrastructure.

Why IBM?

IBM Storage solutions deliver the scalability, security and ease of use that organizations need to manage the massive volumes of data that have become common today. IBM Spectrum Archive provides cost-effective and reliable data storage, and the protection of air gap with simplified tape access plus the rapid deployment of Software Defined Storage.

The IBM Spectrum Archive family featuring IBM Linear Tape File System technology provides direct, intuitive and graphical access to data stored on tape cartridges. As a continuous innovator, IBM invented the LTFS format and was first to market the open file system for single LTO Ultrium tape drives. LTFS is an outgrowth of a decade of leadership as a founding member

of the LTO Consortium and a market-leading supplier of LTO Ultrium tape drives, libraries and cartridges.

With 60 years in the marketplace, IBM continues to create innovative data storage products to help organizations back up and restore data for business continuity, recover data in times of disaster, and archive for data protection and long-term retention. And IBM continually upgrades the file system in order to offer more benefits to suit today's business needs.

In addition to Spectrum Archive Enterprise Edition, IBM also offers Spectrum Archive Single Drive Edition and Spectrum Archive Library Edition software to grow your support at your pace.
